VPIphotonics sets the standard for software and services supporting end-to-end Photonic Design Automation and Optical Equipment Configuration.

VPIphotonics offers the VPIphotonics Design Suite for the design of optical core, metro and access networks, and for the design of optical components and subsystems. These software tools share the same design environment. Hence, component designs can easily be characterized in terms of the impact on system performance. Schematics can be exported for distribution as DynamicDataSheets to VPIplayer, a free tool allowing anyone to run a simulation and investigate particular key parameters.

VPIphotonics' award-winning products are used by forward-looking groups, product design and marketing teams from over 100 commercial corporations and educators in over 140 university programs across the world.

This paper lists 1895 publications in technical journals and conferences where authors refer to the usage of VPIcomponentMaker and VPItransmissionMaker (or their predecessor products) based on information as of August 31, 2024.
